

KENAI™

EnviroPro & EnviroPro²

Salt-Free, Smart, Sustainable Water Solutions for Life

For your comfort, convenience, and safety

If you are looking for a saltless water treatment system, the Kenai EnviroPro or EnviroPro² are great alternatives to a water softener.

We use green technology to capture unwanted minerals, calcium, and magnesium, and prevent them from clogging shower heads and scaling up your wetted appliances (dishwasher, washing machine, hot water tank), glassware, shower doors, and fixtures, without using salt or any harsh chemicals.

CPK-ENVIROPRO

- Environmentally friendly
- Requires no electricity
- Totally maintenance-free
- Easy hassle-free plumbing with simple inlet and outlet connections
- Large capacity for whole home treatment
- 10 x 54 pressure vessel provides high flow and no pressure loss
- Scale reduction without the use of salt or waste water
- Intuitive and easy-to-operate bypass valve
- All polymer materials eliminate corrosion
- Upflow service operation reduces the chance of fouling

CPK-ENVIROPRO2

4.5 x 20 filter cartridges

- **Cartridge 1:**
Sediment/Anti-Scale,
5 microns
- **Cartridge 2:**
Chlorine & Chloramine
Reduction, 1 micron

Add an optional
UV Light to
the EnviroPro²

CWUV4-11

Start enjoying the Kenai EnviroPro difference today.

Filtration

Removing contaminants from your water.

Water is the most important resource for our daily lifestyle. The quality and purity of the water in our homes is crucial to us and a critical component of a healthy diet. The responsibility of the 'final barrier' is on the homeowner to provide confidence in your water. This is entirely possible for your peace of mind with a properly applied water treatment system.

The water supplied to your home comes from one or a number of different sources depending on where you live. It can be from a lake, river, or groundwater from a well. The characteristics of the water will depend on the journey that it takes to get to your home. There will be particles, minerals, metals, and chemicals that are dissolved in the water.

Public Water Supply

Perhaps the greatest achievement of man toward growth and progress was the development of water distribution and disinfection to clear it of infectious diseases and parasites. Public water supplies have stringent requirements for filtration to clear it of particulates and organisms at the source, securing it with disinfection agents to keep it free of these until it gets to your home.

EnviroPro²

EnviroPro² Complete Serviceable System Includes:

- 5 micron Sediment filter with Scale Armor
- 1 micron chloramine-reducing filter
- Pressure monitoring gauges
- Drain valves
- Mounting bracket
- Service tools

CPK-EP2-SEDIMENT

- Melt-blown Sediment Filter with Scale Armor
- 4.5 x 20
- 5 micron

CPK-EP2-CHLORAMINE

- Chloramine Carbon Block
- 4.5 x 20
- 1 micron

KENAITM EnviroPro

SPECIFICATIONS

Plumbing Connections

3/4", 1", or 1.25" NPT
3/4", 1", 1.25", or 1.5" PVC Glue
3/4", 1", 1.25", or 1.5" Sweat
3/4" or 1" Sharkbite
3/4" or 1" John Guest

Service Flow Rates

12.7 gpm (ANSI/NSF Std 44 Equivalent)

Operating Pressure

20 – 125 psi

Operating Water Temps

Min 40° F – Max 110° F

MEDIA SPECIFICATIONS

pH Range – 6.5-9.5

Hardness (carbonate), Max ppm – 1400

Salinity, Max ppm – 35000

Iron, Max ppm – 0.5

Manganese, Max ppm – 0.05

Free Chlorine, Max ppm – 3

Copper, Max ppm – 1.3

Oil – Free

Hydrogen Sulfide – Free

EnviroPro²

Cartridge 1

Working Temperature Range:

Min 39.2°F (4°C) – Max 177°F (80.6°C)

Media Temperature Range:

Max 220°F (104°C) in heated environment

5 microns rated

Cartridge 2

Working Temperature Range:

Min 39.2°F (4°C) – Max 125°F (52°C)

ScaleArmor™ Media Temperature Range:

Max 220°F (104°C)

1 micron rated
